DEXTER BIODIESEL SOLUTIONS SUPPLIES KEYSTONE WITH COLDCLEAR™ THE FIRST 45 GPM COLDCLEAR™ IN THE INDUSTRY

Dexter Biodiesel Solutions, a distributor for the Schroeder Biofuels [ColdClear™](#), recently supplied Keystone BioFuels of Pennsylvania with a 45GPM ColdClear™ unit. The BCC900 is capable of 45 GPM and can process 200,000+ gallons before the cartridges need to be changed. The BCC900 supplied by Dexter Biodiesel Solutions is the first BCC900 anywhere in the world and is also the largest ColdClear™ unit install to date, keeping Dexter Biodiesel Solutions as the “Go to” company for the ColdClear™ unit.

Keystone BioFuels will use the ColdClear™ unit as a quality control measure to ensure that the biodiesel they produce is consistently below the ASTM Cold Soak standard. The BCC900 from Dexter Biodiesel Solutions will also help them to achieve the coveted BQ9000 status.

The ColdClear™ unit is a three (3) stage filtration, adsorption and absorption process which removes polar and non-polar compounds that lead to crystallization. The ColdClear™ process results in better Cold Soak times and can lead to better Cloud Point, Pour Point, CFPP and oxidation stability.
