DEXTER BIODIESEL SOLUTIONS OFFERS 5GPM COLD CLEAR DEMO UNIT FIRST COLD CLEAR DEMO TO HIT THE MARKET

Dexter Biodiesel Solutions, a distributor for the Schroeder Biofuels [ColdClear™](#), is proud to announce that Dexter Biodiesel Solutions will be able to exclusively offer their customers a new BCC100 - 5GPM ColdClear™ Demo unit. The ColdClear™ unit is designed to lower biodiesel producers [Cold Soak number](#) within and below passing ASTM standards in a simple and cost effective method. The three (3) stage filtration housing combines traditional filtration with innovative cartridges that adsorb and absorb polar and non polar compounds that cause crystallization. ColdClear™ has also been found to lower the Cloud Point, Pour Point, and help with Oxidation Stability.

The [BCC100](#) is a 5GPM unit. This unit will be able to process 15,000 or more gallons of biodiesel before the elements need to be changed. The average cost per gallons is 2 ½ - 3 cents per gallon. It is recommended that this unit be placed at the end of the biodiesel process in a “slip” stream for best results during the trial.

The unit will be available to [Dexter Biodiesel Solutions](#) customers for a one (1) week trial period. Dexter Biodiesel Solutions will require a deposit that is fully refundable upon return and inspection. Dexter Biodiesel Solutions will also require the purchase of the consumable cartridges to be used in the ColdClear™ unit. This is a great opportunity for Biodiesel Producers that are interested in the ColdClear™ unit and want to see how it performs on their specific fuel.
